SUMMARY

Data Analyst with 2.5 years across broadband subscriptions and B2B sales operations, turning raw data into ranked, money-sized decisions with SQL, Python and Power BI. Recent work includes showing that only £6.3K of a £50K retention budget pays back, and finding a tracking gap affecting 41% of purchases in GA4 data. Validates the data before trusting it, states uncertainty plainly, and designs the test that proves each recommendation.

PROFESSIONAL EXPERIENCE

Sales Excellence Executive (Data & Analytics) | Iris Waves, Delhi — Dec 2025 - Jun 2026

- Built 4 Power BI dashboards on machine base, client allocation and 3-year revenue per machine for 3 leadership stakeholders, adding state, area and national KPIs beyond the brief.
- Moved Excel-based company datasets into a SQL database and designed validation checks across 5+ sources, cutting reporting errors by ~30%.
- Found a 15% revenue decline in one product segment through segment-level variance analysis, prompting a targeted recovery plan for that segment.
- Ran exception tracking for a 1,300+ PC rollout, surfacing 40+ delivery risks early and helping reach 98% on-time delivery.

Product Strategist and Social Media Manager | The Creative Cosmos (Freelance) — Jan 2025 - Apr 2025

- Ran product strategy and organic Instagram for a handmade jewellery brand, no paid ads (150 followers at start, 500+ today).
- Built an analytics web app for the brand; both Instagram and market-stall sales grew over the engagement.

Business Analyst | Ubixe Infotech Pvt. Ltd., Gurgaon — Jan 2023 - Dec 2024

- Analysed the subscriber database of a residential broadband provider using SQL and Python (pandas), segmenting 2K+ customers by plan, spending, payment behaviour and tenure.
- Built logistic regression and K-means models to find high-value and at-risk segments, then ran campaigns that grew sales by 15%, mainly by moving monthly subscribers to quarterly and yearly plans, and cut churn-related inquiries by 12%.
- Built the Power BI dashboards marketing used to plan and track campaigns, and automated weekly data cleaning in Python (~6 hours to under 1 hour per cycle).

PROJECTS

Funnel Intelligence: GA4 E-commerce Analytics
SQL, BigQuery, Python, scikit-learn | github.com/abhishek-patnaik/ga4-funnel-intelligence

- Audited 4.3M GA4 events (360K sessions) and found 41% of purchases missing add-to-cart tracking; rebuilt step rates so real buyers were not dropped.
- Built a session purchase model scored at the 5th click and tested on an unseen month (ROC-AUC 0.76); the top 10% of sessions held 43% of buyers, and the model beat a rule-based baseline 2.3x on PR-AUC.
- Ranked fixes with 20,000-run simulations; the top fix (new-visitor checkout) is worth about $18.7K/month, with a powered A/B test plan to prove it in 14 days.

Customer Value Engine: CLV and Retention Budgeting
Python, Power BI, BG/NBD, Gamma-Gamma | github.com/abhishek-patnaik/customer-value-engine

- Analysed 1M+ transactions across 5,839 customers; found 4.7% of accounts drive half the revenue and showed an apparent 46% drop in new customers was a counting error.
- Built lifetime value models from the original papers on a seasonal clock, backtested in both seasons; the top 10% of predicted customers held over 60% of actual revenue.
- Showed only £6.3K of a £50K retention budget pays back (about £18.8K margin from 394 accounts); delivered as a Power BI report on a star-schema data model with 35 DAX measures.

Review Intelligence: LLM Complaint Classification
Python, Ollama (Qwen 2.5 7B), pandas | github.com/abhishek-patnaik/review-intelligence

- Classified 40,950 reviews into 12 complaint themes with a free local LLM and a fixed JSON schema; raised micro F1 from 0.78 to 0.81 with explicit labelling rules.
- Validated the model against delivery records without labels: reviews tagged "late" matched late orders 37% of the time vs 4% for no-complaint reviews.
- Ranked fixes by order value at stake; undelivered parcels came top (4,597 reviews, R$730K in orders), and 10% of sellers drew complaints on 67% of reviews.

SKILLS

Languages	SQL (CTEs, window functions), Python (pandas, NumPy, scikit-learn)
Analytics & BI	Power BI (DAX, data modelling), Excel (pivot tables, advanced formulas), GA4, KPI design
Statistics	A/B testing and power analysis, hypothesis testing, funnel and cohort analysis, survival analysis, Monte Carlo simulation
ML & AI	Logistic regression, Random Forest, K-means, CLV modelling (BG/NBD), LLM classification and evaluation (Ollama)
Data & Cloud	BigQuery (partitioning, scheduled queries), MySQL, DuckDB, Git

EDUCATION

Master of Computer Applications (MCA), Jain University, Bangalore | GPA 9.1/10 — 2022 - 2024

Bachelor of Computer Applications (BCA), Maharaja Surajmal Institute, Delhi | GPA 8.9/10 — 2019 - 2022
